POTTHALAM MOUNIKA

Generative AI Trainee — Python — Java — Machine Learning — LLMs

+91-6300636367 — potthalammounika17@gmail.com

LinkedIn — GitHub — HackerRank

SUMMARY

Computer Science Engineering graduate with a strong foundation in Python, Java, SQL, Data Structures, and Machine Learning. Experienced in developing machine learning projects and currently pursuing hands-on training in Generative AI, Large Language Models (LLMs), and NLP. A quick learner with a problem-solving mindset, eager to apply technical knowledge to build innovative software solutions and grow as a Software Engineer.

EDUCATION

Kalasalingam Academy of Research and Education 2022 – 2026
B.Tech in Computer Science Engineering (AIML) **CGPA: 9.01/10**

Sri Chaitanya Junior College 2020 – 2022
Intermediate (XII) **Percentage: 96.3%**

Vignan High School 2019 – 2020
SSC (X) **Percentage: 94.33%**

EXPERIENCE

Generative AI Trainee – Eduleem 2026 – Present

- Training in Generative AI, LLMs, NLP and Python-based AI application development.
- Exploring data processing, modern Generative AI workflows, and practical LLM-based solutions.

Machine Learning Intern – Technook Mar 2024 – Apr 2024
Remote

- Developed supervised and unsupervised machine learning models using Python.
- Performed data preprocessing and feature engineering using Pandas and NumPy.
- Evaluated machine learning models and experimented with different approaches to improve performance.

PROJECTS

AI-Powered Plant Disease Detection *Python, TensorFlow, Keras, CNN*

- Developed a deep learning model using Convolutional Neural Networks (CNN) to identify plant diseases from leaf images.
- Trained and evaluated the model on a public dataset, achieving approximately 85% classification accuracy.
- Designed the solution to support early plant disease detection and help reduce potential crop loss.

Forest Fire Detection *Python, Scikit-learn, Pandas, Random Forest*

- Developed a machine learning model using Random Forest to predict forest fire risk based on environmental conditions.
- Used temperature, humidity, and wind speed features to classify high-risk conditions.
- Achieved over 90% accuracy on the available dataset.

NavBot – Autonomous Waiter Robot for Hotel Food Service *Arduino, C++, Raspberry Pi, A* Algorithm*

- Developed an autonomous waiter robot with ultrasonic sensor-based obstacle detection and distance measurement for hotel food service.
- Integrated Arduino, Raspberry Pi, and motor control components; applied the A* pathfinding algorithm for efficient obstacle-avoiding navigation.

TECHNICAL SKILLS

Programming	Python, Java, SQL
Generative AI	Generative AI, LLMs, NLP
Python Libraries	Pandas, NumPy
CS Fundamentals	Data Structures and Algorithms, OOP, DBMS, Computer Networks, Operating Systems
Databases	MySQL
AI / Machine Learning	Machine Learning, Deep Learning, CNN, Random Forest, TensorFlow, Keras, Scikit-learn
Tools	Git, GitHub, VS Code, Jupyter Notebook

CERTIFICATIONS & ACHIEVEMENTS

- **IndiaAI Mission Fellowship:** Autonomous Waiter Robot for Hotel Food Service project recognized under the IndiaAI Mission, Ministry of Electronics and Information Technology (MeitY), Government of India, with project funding.
- AI Bot Hackathon – Coding Blocks, 2024
- Machine Learning Internship – Technook, 2024
